

SCIENCE SORTING STRIPS

Make 1 set of Science Sorting Strips for each pair of participants. Cut into individual strips and put each set into an envelope or attach them with a binder or paper clip.

Science is a collection of facts.

Science proves ideas.

There is a single scientific method that all scientists follow

Experiments are a necessary part of the scientific process- without an experiment, a study is not rigorous or scientific.

Because scientific ideas are tentative and subject to change, they can't be trusted.

Scientific ideas are judged democratically based on popularity.
