

STUDENT WORK SAMPLES

Create one set of student work samples for every group of 3-4 participants.

GREEN DAY

Humans are decomposers, because they broke down food like a banana slug.

1

GREEN DAY

Yes, humans are decomposers because they eat meat and seeds and other thing and they eat things do what bacteria slugs do.

2

GREEN DAY

1. No because people eat food that can be turned into real poop
2. No because decomposers have different system
3. No because animals eat different stuff from us.

3

GREEN DAY

Humans are ^(dictation) not decomposers because why would anyone eat leaves or logs? The other reason why is humans don't have the same internal organs as decomposers. And humans cannot poop out dirt. Instead they leave scat.

4

Shelley

I don't think humans are decomposers
When an "FBI" breaks down food
the don't poop out ~~thing~~; they
poop out soil like the worms, slug.
Humans poop ~~does not~~ decomposers.
What do you think.

5

GREEN DAY

Human's are not
decomposers because
human's don't eat
dirt. Human's poop
goes in the ocean
not in the dirt. Human's
don't poop outside.

6

GREEN DAY

I think they are decomposers because when they eat they poop. They also eat vegetables and fruits. And they also eat leaves such as lettuce.

7

GREEN DAY

Humans aren't decomposers. They can't poop in the soil. They can't eat wood because it's too hard.

8

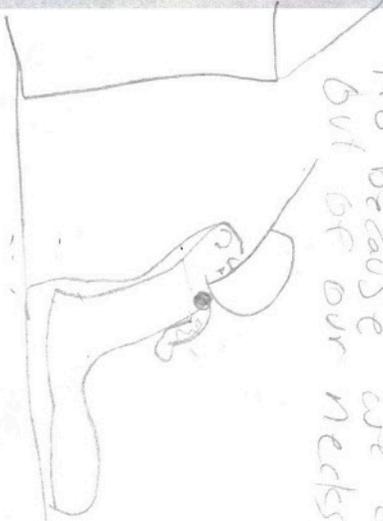

GREEN DAY

No because we don't
poop out dirt.

No because we don't
have a decomposing

bodies like brain slugs.

No because we don't poop
but on our necks

9

GREEN DAY

I think we are decomposers

because we all poop and the scat
can be used to help the soil.

We also make compost that

makes soil. We also have

garbage that goes into compost.

10

GREEN DAY

Yes I do because we poop and so do they. We also sometimes eat dead plants like them. We also walk

11

GREEN DAY

People aren't decomposers because they can't eat random leaves. They also can't poop dirt. They also can't eat dead stuff.

12
